ROQ OUT

ROQ OUT is a automatic folding, packaging and labeling machine. Primarily for T-shirts, sweaters and polos the ROQ OUT provides a complete 3 in 1 solution.

Able to boost any business, the ROQ OUT can be customized according to the customers' needs.

The final dimensions of the folded piece can be adjusted in 3 positions by changing the folding plates and adjusting the fold position.

Non-standard dimensions between the minimum and maximum limit can be achieved by customizing the machine.

In the packaging phase, the ROQ OUT uses rolls of low-density polyethylene (LDPE) or polypropylene (PP) plastic film, 40 to 60 microns thick, previously folded in two layers, with the possibility of using poly mailer plastic.

The bag's dimensions are automatically adjusted by the operator on the interface. The length is set according to the width of the film roll being used.

The label is placed on the last station. The content of the label is set on the machine console or on the direct supplied computer using their ERP.

After labeling the piece is ready!

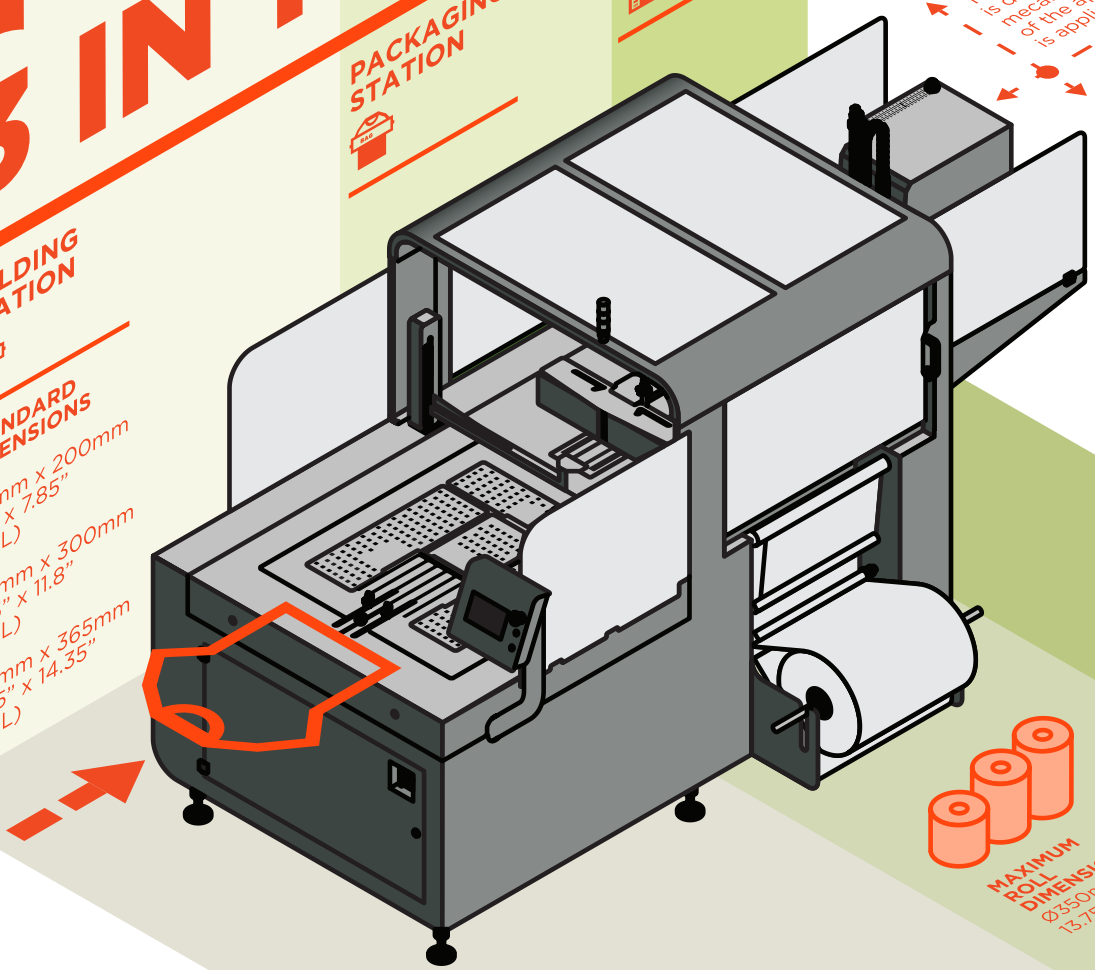
3 IN 1

FOLDING STATION

PACKAGING STATION

LABELING STATION



The label position is defined by the mecanical adjustment of the applicator and is applied automatically.

There is a ramp at the end of the labeller that will slide the piece down to allow for easier box packing.

STANDARD DIMENSIONS

165mm x 200mm
6.5" x 7.85"
(WxL)
